Professional Summary

Senior Full-Stack Software Engineer with 6 years of experience, including 3 years at Microsoft on Azure AI Document Intelligence. Builds web and mobile apps, backend APIs, cloud infrastructure, and AI features with React, TypeScript, Node.js, C#, and Java. Hands-on with IT support: builds and repairs PCs and laptops, runs a Proxmox homelab, hosts sites on Cloudflare, and sets up desks and software for colleagues. Currently studying a Master of IT at Adelaide University.

Experience

Senior Software Engineer **Aug. 2025 – Present**
Sampras HK Remote, Hong Kong

- Delivered 9 full-stack projects (APIs, admin portals, and websites) with NestJS, React, and Next.js for Hong Kong clients in retail, finance, food & beverage, and charity.
- Reduced API median latency by 97% in local benchmarks (2.5 s to 61–78 ms) on 6 endpoints by optimizing permission loading, with the same access results for all 692 tested accounts.
- Rebuilt the company's virtual waiting-room product on Cloudflare Workers and Durable Objects, replacing shared DynamoDB queue state with one Durable Object per event; tested with 5,000 simulated visitors.

Software Engineer – VDI Team **Mar. 2022 – Apr. 2025**
Microsoft Taipei, Taiwan

- Built front-end features for Azure Form Recognizer Studio with React, TypeScript, and Redux, including the document labeling UI used to train custom extraction models.
- Migrated Form Recognizer Studio features into Azure AI Foundry as the two products merged.
- Built a front-end monorepo that combined Azure AI products from multiple departments, as the platform grew from OCR to images and audio in Azure AI Foundry.
- Introduced RTK Query for API caching and request deduplication, cutting repeated API calls and page loading time.
- Kept unit test coverage above 90% with Jest and React Testing Library, improving release stability.
- Used GitHub Copilot to speed up development of Form Recognizer document processing features.
- Set up a shared WSL2 Linux development environment for the team, cutting manual setup work.
- Built accessibility features so the product works for more users.

Front-End Developer **Feb. 2021 – Feb. 2022**
Gold Crown Technology Co., Ltd. Taipei, Taiwan

- Built web apps with React, Vue, and TypeScript, with a focus on easy-to-use interfaces.
- Added server-side rendering with Next.js and GraphQL to improve SEO and page load times.

Front-End Developer **Nov. 2020 – Feb. 2021**
DediProg Taipei, Taiwan

- Maintained and updated legacy jQuery code and improved front-end performance.

Front-End Developer **Feb. 2020 – Jul. 2020**
KozyGuru Taipei, Taiwan

- Built the core property management platform for Australian Airbnb listings.

Projects

Microsoft Form Recognizer Toolkit | *Open Source, Azure AI, GitHub*

- Contributor to Microsoft's open-source Form Recognizer Toolkit, supporting document intelligence tooling in a production-adjacent open-source codebase.

Microservice Demo Auction Platform | *.NET 8, Next.js 14, RabbitMQ, Docker* GitHub

- Built an auction app from separate services with login, bidding, and real-time notifications, using RabbitMQ and gRPC between services and Docker Compose to run them.

AI Agent Development | *Java 21, Spring AI, Vue 3, pgvector* GitHub | Live Demo

- Built a RAG chatbot and a ReAct agent that answer from documents and run tasks with web search, PDF generation, web scraping, and MCP tools, streaming replies to a Vue 3 UI.
- Containerized the application with Docker Compose and configured GitHub Actions deployment through a self-hosted runner.

AI Web Generator | *Java 21, Spring Boot, LangChain4j, LangGraph4j, MySQL, Redis, Vue 3* GitHub | Live Demo

- Built a web app that turns a text prompt into a working website (single HTML, multi-file, or full Vue project), streams the code live over SSE, and lets users click any element in the preview to edit it.
- Gave the AI agent 6 file tools and built an 11-step LangGraph4j workflow that collects images, icons, diagrams, and logos in 4 parallel branches, then checks code quality and retries if needed.
- Added Redis chat memory, rate limiting (5 requests/min per user), Prometheus/Grafana monitoring, and 36 tests; deployed with Docker Compose and GitHub Actions.

UCompass | *React Native, Expo, ASP.NET Core, PostGIS, SignalR, Ollama* Devpost | GitHub

- Built a map app for Adelaide and Flinders students to find flatmates, buy and sell items, and join meetups, as a team of 4 at the 2026 CS Club Hackathon (Sep. 2026) in 33 hours.
- Wrote the .NET 10 backend: 55 API endpoints across 12 controllers, email-code and JWT login, SignalR chat, PostGIS map search, and Cloudflare R2 photo storage.
- Added photo AI with Qwen3-VL on local Ollama so users can fill in a listing or search the market from a photo; deployed the API with Docker Compose and GitHub Actions.

Skills

Languages: TypeScript, JavaScript, C#, Java, Python, SQL, HTML/CSS
Frontend & Mobile: React, Next.js, Vue 3, Redux Toolkit, RTK Query, React Native, Expo, Monorepo
Backend: Node.js, NestJS, ASP.NET Core, Spring Boot, GraphQL, SignalR, RabbitMQ, gRPC
Cloud & DevOps: Cloudflare Workers, Azure, Docker, GitHub Actions, Linux, Proxmox, Prometheus/Grafana
Data: PostgreSQL, MySQL, MongoDB, Redis, pgvector, PostGIS
AI Engineering: RAG, AI Agents, Tool Calling, MCP, Spring AI, LangChain4j, LangGraph4j, Ollama
Testing & Tools: Jest, React Testing Library, Selenium, Git, Linux, Claude Code, Codex

Education

Master of Information Technology **2025 – Jul. 2027 (Expected)**
Adelaide University (commenced at UniSA) Adelaide, Australia

Bachelor of Science **2013 – 2017**
Fu Jen Catholic University Taipei, Taiwan
